

ADMIRAL LIQUID AND ADMIRAL WSP

Admiral is used as an integral component in a lake and pond management program by controlling the growth of several types of aquatic weeds and algae while aesthetically enhancing the appearance of the water.

As an important part of a lake management program, Admiral delivers all of the algae control you demand, and has been registered by the EPA. Create more beautiful waterways two different ways with the commanding presence of Admiral Liquid or Admiral WSP - only from Becker Underwood.

Available in the following package sizes:

WSP

4 x1 gallons
30 gallon drums

275 gal tote

Admiral WSP's easy to calculate, simple to dispense

Each Admiral WSP® packet weighs less than a pound. So the packets are easy to handle. And because the packets are pre-measured, rate calculations are simple to make-no matter how large or small a body of water you are treating.

Each packet treats one acre-foot of water. The rate chart tells you the number of packets recommended. All you have to do is toss in the correct number of packets. And *that's it*. You're done.

Suggested rates for Admiral Liquid and Admiral WSP

Area To Be Treated	Rate for 1PPM	Rate for 2PPM
1 acre-foot	1 quart (or 1 WSP)	2 quarts (or 2 WSP's)
4 acre-feet	1 gallon (or 4 WSP's)	2 gallons (or 3 WSP's)
8 acre-feet	2 gallons (or 8 WSP's)	4 gallons (or 16 WSP's)

* For control of filamentous blue algae, blue-green algae, Chara, Leafy Pond Weed, Spirogyra, Slender Naiad, and Water Milfoil (with early treatment) at depths greater than 2 feet.

* Only for prevention of tuber formation of Hydrilla at depths greater than 2 feet.
